

Critical Measurements

Floor to bottom of light – 78”

Distance from bottom of light to top of light – 7’ – 5” deep ; 9’- 8” deep

Distance between hang points – 4’

Mounting Tips

Use eye bolts or S-hooks attached firmly to a rigid point in ceiling (i.e. ceiling joist)

Space hanging points as close to 4’ as possible. Chain or cable may compensate for a few inches if necessary.

The aircraft cable hanging kit that is included adds 16”-18” to the distance that the light hangs from the ceiling.

ADJUSTABLE TURNBUCKLE

It's best to use an adjustable turnbuckle (as seen above) when the light is hung. The turnbuckle will allow for quick and easy leveling between ends. Turnbuckles and other hardware needed to hang your DIAMOND light can be found at most hardware stores.
